Confidentiality & Compliance Policy

At Waterlabs AI, we are dedicated to upholding the highest standards of confidentiality and compliance in the development and utilization of our healthcare tool. This policy outlines our commitment to safeguarding sensitive information and adhering to all relevant regulations within the healthcare sector.

1. Data Privacy and Confidentiality:

We recognize the importance of protecting patients' and healthcare providers' sensitive data. Any information collected, stored, or processed by our healthcare tool will be treated with the utmost confidentiality and in compliance with relevant data protection laws. Access to this data will be restricted to authorized personnel only, ensuring its security and privacy.

2. HIPAA Compliance:

Our healthcare tool is designed to meet the requirements set forth by the Health Insurance Portability and Accountability Act (HIPAA). We ensure that all electronic protected health information (ePHI) is handled, stored, and transmitted in a manner that aligns with HIPAA guidelines. Our employees are trained to understand and adhere to HIPAA regulations.

3. Secure Infrastructure:

We maintain a secure technological infrastructure to protect against unauthorized access, data breaches, and cyber threats. Regular security assessments and audits are conducted to identify vulnerabilities and ensure a robust defence mechanism.

4. User Authentication and Authorization:

Access to the healthcare tool is controlled through strong user authentication and authorization mechanisms. Each user is assigned appropriate access rights based on their roles and responsibilities, preventing unauthorized access to sensitive data.

5. Audit Trails and Monitoring:

Our healthcare tool maintains comprehensive audit trails that capture all system activities and interactions. This monitoring system helps us track and investigate any unusual or unauthorized actions, ensuring accountability and transparency.

6. Employee Training and Awareness:

All employees and relevant stakeholders undergo mandatory training on data privacy, security protocols, and compliance requirements. This ensures a workforce that is well-informed about their responsibilities in maintaining confidentiality and compliance.

7. Data Sharing and Transmission:

Any sharing or transmission of healthcare-related data will be conducted securely, utilizing encrypted communication channels and secure data transfer protocols.

8. Incident Response and Reporting:

In the event of a data breach or security incident, a well-defined incident response plan is in place. Prompt reporting, investigation, and resolution procedures are followed to mitigate risks and ensure compliance.

9. Continuous Improvement:

We regularly review and update our policies and procedures to align with changes in regulations and industry best practices. This commitment to continuous improvement strengthens our ability to maintain confidentiality and compliance.

By adhering to this Confidentiality and Compliance Policy, we affirm our dedication to protecting sensitive healthcare information and ensuring that our healthcare tool operates within the framework of confidentiality and regulatory compliance.

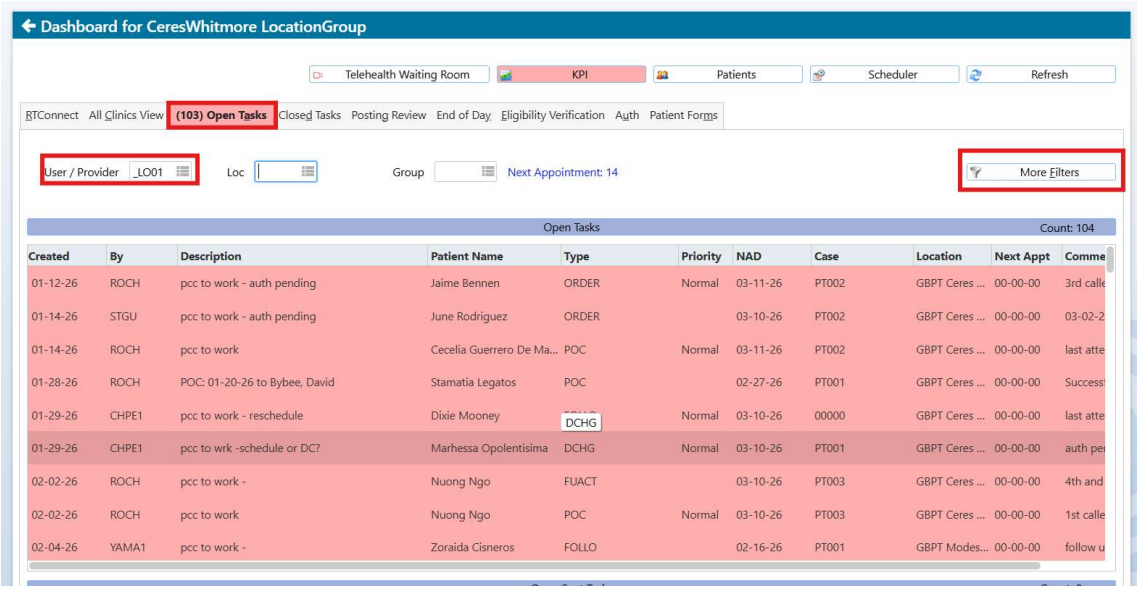

TPG POC SOP

Step 1: Login to Raintree

Link: https://goldenbear.raintreeinc.com/webtraindocumentation
Username: W**N
Password: Ney******04

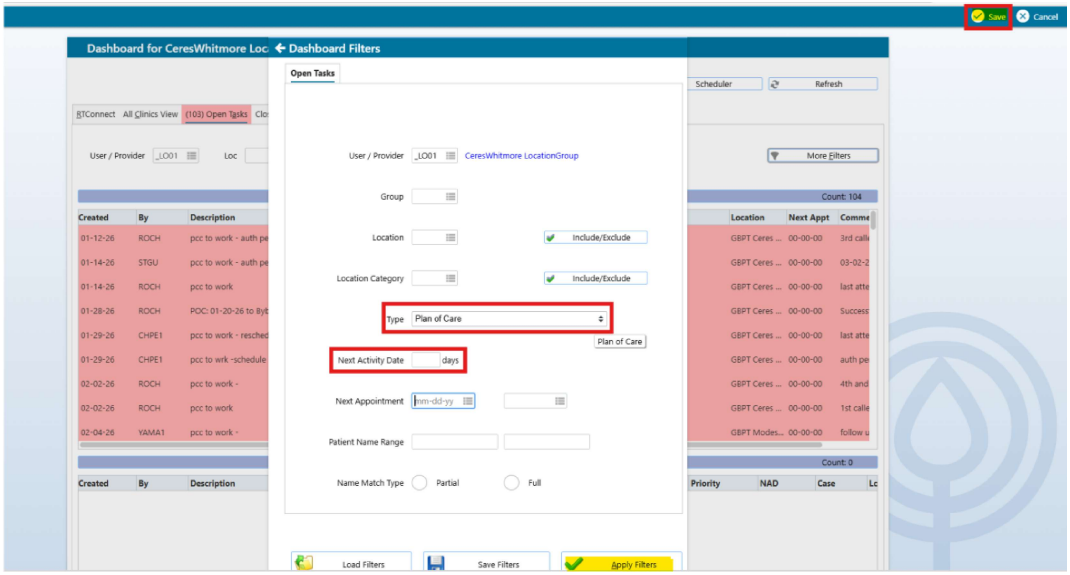

1.1 : Click on **Dashboard** > **Open Task** > update the Clinic location in **User / Provider** tab (*List of clinic location will be shared in excel*) > Click on **More Filters**.

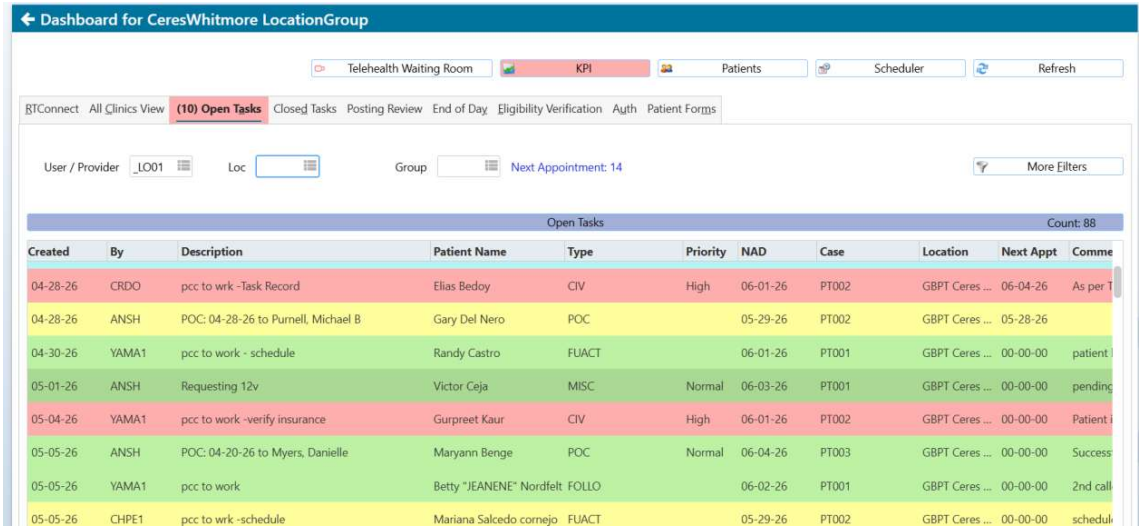

1.2 - Upon clicking More Filters, Dashboard filter screen pops up. Update as outlined below.

- Type – **Plan of care**
- Next Activity Date – **To be blank**
- Click on Apply **Filters** or Click on **Save** or Enter **CTRL+S** to receive the inventory.

Step 2: Inventory and account selection.

2.1 – Once the inventory is received, accounts will be reflected in multiple colors (Red / Yellow / Green / Blue). We need to work on accounts which reflect Red and yellow. Red will be the first priority and yellow will be the second priority.

2.2 – By double-clicking the account, a task will be launched. In the task, need to validate the no. of attempts done and validate if the response received. Below are the validations which need to be validated.

- 1st and 2nd attempt client will be working on it, we should not be working. If we come across this scenario, need to place account as exception and proceed with next account. (Exception comment – **1st and 2nd attempt not completed**.)
- 3rd, 4th and 5th attempt we need to work. Maximum of attempts will be limited to 5.

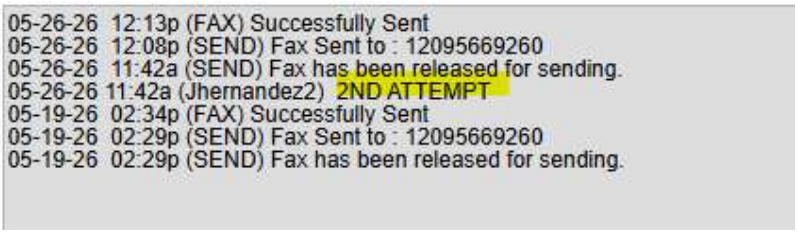

Step 3: Recognition of attempts and how to work.

3.1 – Below points to be followed once after accessing the task.

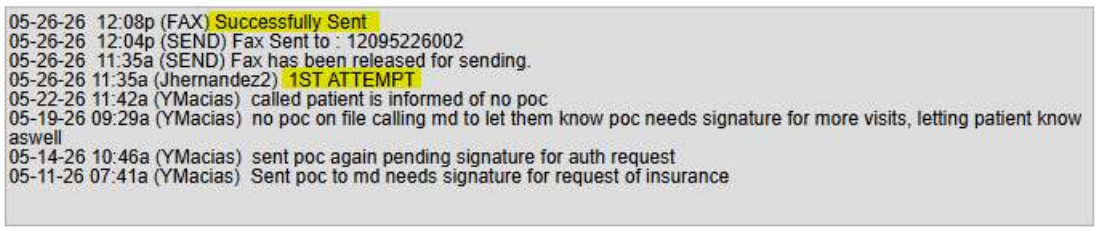

- After each attempt (Including 1st and 2nd), if the fax sent successfully, in the task we will able to find a unique word **Successfully Sent**.

- If this unique word is available, it means the previous attempt has completed. We need to work on next attempt.
- In few of the cases, in the task it will be mentioned as 1st attempt and 2nd attempt. In few cases, there will be no indication of 1st attempt and 2nd attempt.

- Need to check the unique word **Successfully Sent** is available twice. If available, need to work on third attempt.
- If **Successfully Sent** is available only once, it means 2nd attempt is pending. We will not work; client will be working on it.

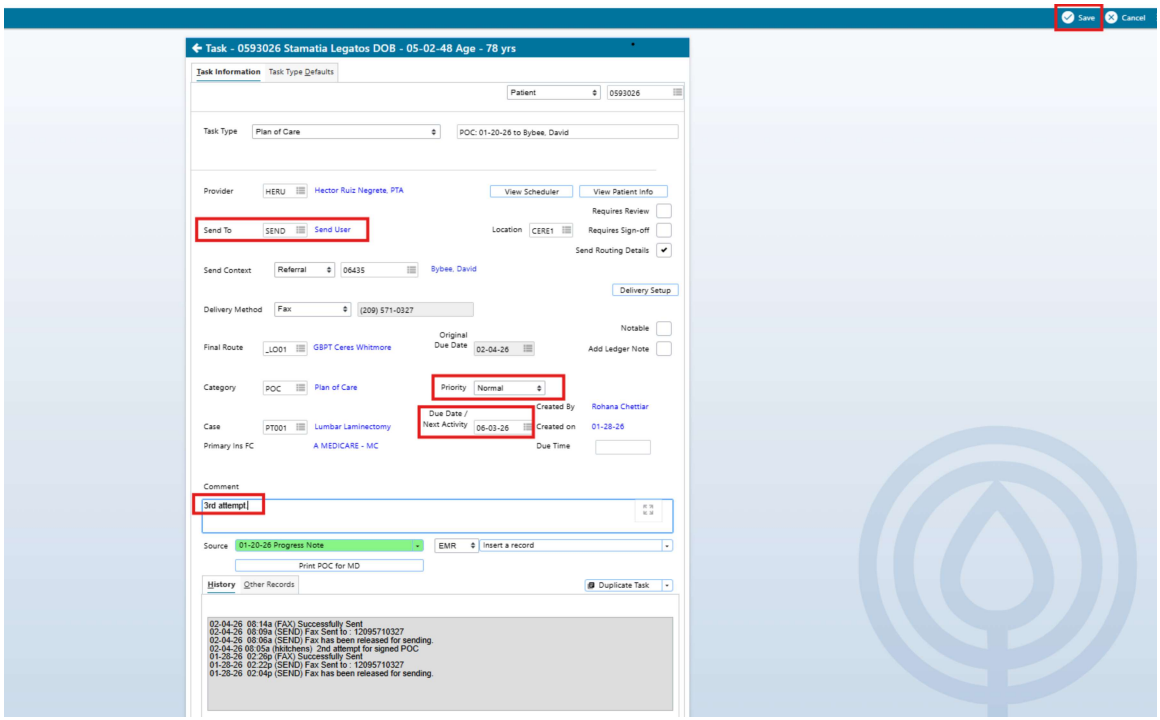

- In order to work on 3rd and 4th attempt, need to make sure that **Successfully Sent** is available for the recent attempt.

Step 4: **How to work on 3rd and 4th attempt.**

4.1 - Once task is launched, need to follow the steps below as outlined.

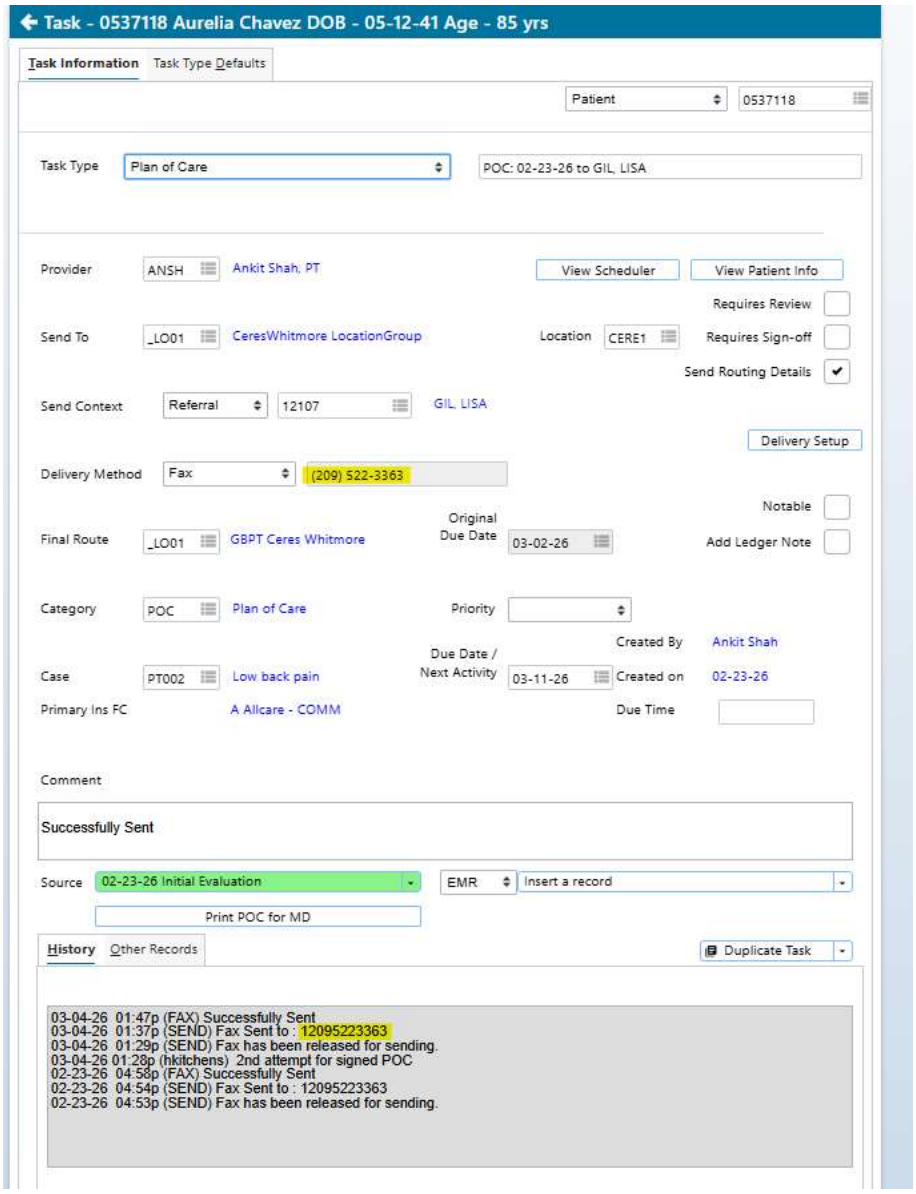

- Send to – **SEND**
- Priority – **Normal**
- Due Date – The seventh day from the date the account is worked on. (For example: If the account is worked on 05/29/2026, the due date will be 06/05/2026)
- Comments – Based on the attempt we are working on, update the comments. **3rd Attempt** or **4th Attempt**.
- Click on **Save** or **CTRL+S**.

Note: If the 3rd or 4th attempt has already been made and there is no indication of "Successfully Sent," it is necessary to follow up on the most recent attempt. For instance, if the 3rd attempt has been completed and there is no "Successfully Sent" status, we should focus on following up solely on the 3rd attempt as illustrated above.

4.2 - During the 3rd Attempt, it is necessary to verify whether the Fax# provided in the comments corresponds with the one in the Task. If they match, further action should be taken; if they do not match, the account should be placed in exception and the next account should be addressed.

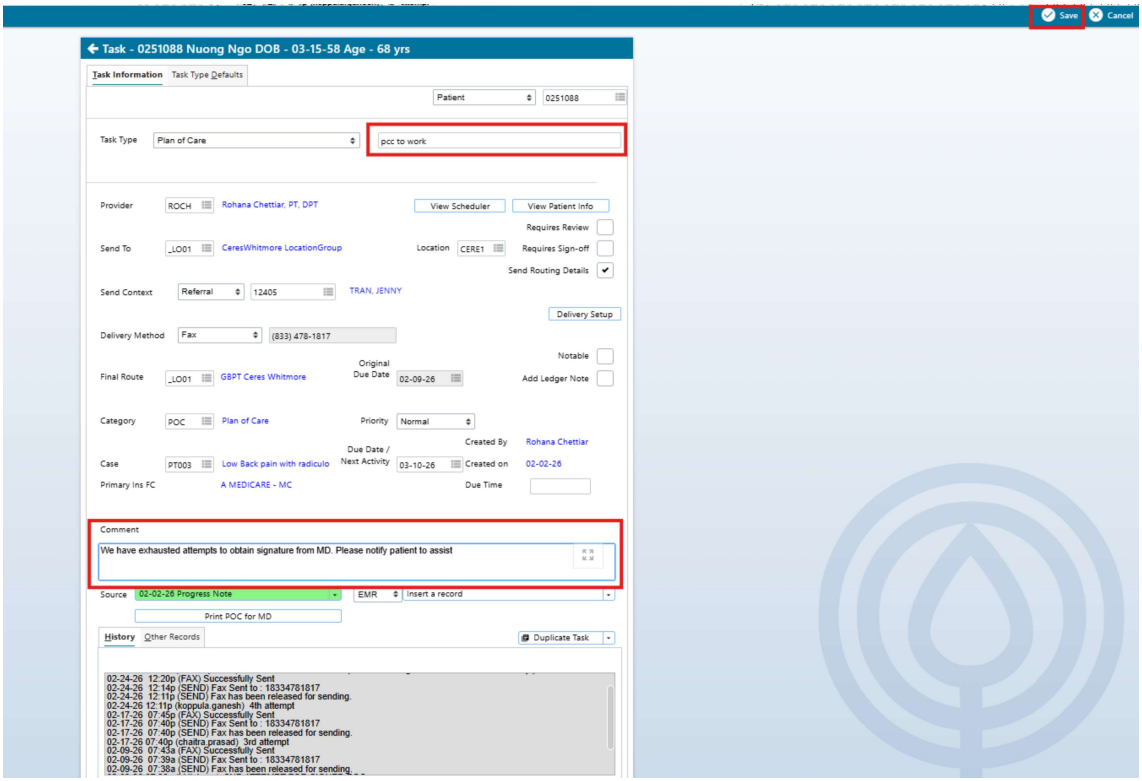

Exception comment – **Fax# not matching for 1st / 2nd Attempt.**

Step 5: **How to work on 5th Attempt**.

5.1 – Follow the below instructions as outlined below.

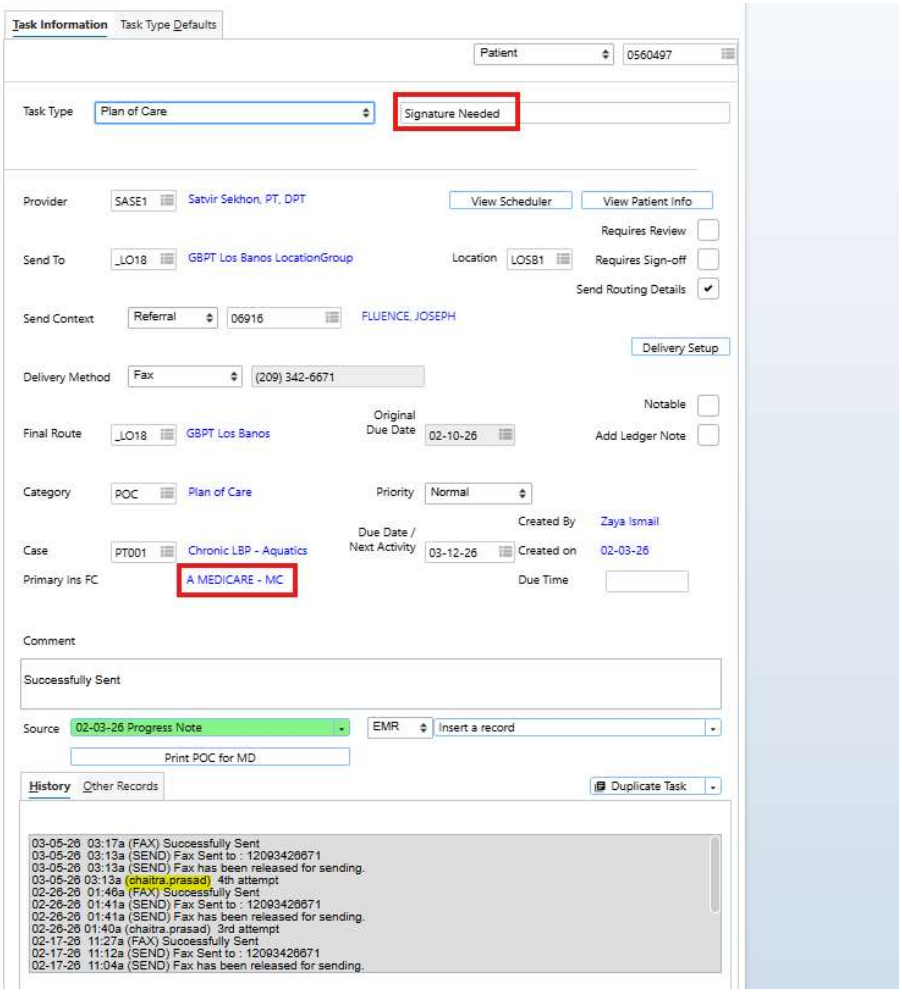

- Update description as **PCC to work**
- Enter the comments as **We have exhausted attempts to obtain signature from MD. Please notify patient to assist.**
- Click on **Save** or enter **CTRL+S.**

Step 6: **Medicare Payer validation and exceptions**.

6.1 – Before moving forward with the regular workflow, it is important to validate the point outlined below if the patient has Medicare as their payer.

- In the task description, there must be a word that indicates "**Signature needed**".
- If the word "**Signature needed**" is present, proceed with the next actions.
- If it is not present, the next step will involve reviewing the **task comments** to check for the visibility of Raintree logins for **chaitra.prasad** or **koppula.ganesh**.
- If they are displayed, proceed with the work according to the SOP. If they are not displayed, treat the account as an exception.
