Therapy – Physical, Right heel pain possibly plantra fasciilis, 21-Apr-2026 10:52:00 PDT

Chief Complaint
health maintenance

History of Present Illness
49-year-old male with a history of plantar fasciitis, asthma, sleep apnea, GERD with eosinophilic esophagitis, PTSD, generalized anxiety, and insomnia, presenting for follow-up health maintenance with ongoing right heel pain and bilateral elbow pain.

Right heel pain and plantar fasciitis
- Right heel pain has persisted since approximately October to November, described as bruise-like pain localized to a small circumscribed area in the posterior plantar surface of the heel, without similar symptoms in the left foot.
- He has a history of plantar fasciitis in both feet and previously completed physical therapy years ago.
- He denies a specific inciting event such as hiking but associates symptom onset with starting a new job and wearing new shoes.
- He uses custom orthotics made last year and has tried home measures including rolling and the golf ball technique; symptoms can be severe on first steps in the morning, requiring footwear at bedside to ambulate.
- Current analgesic use includes celecoxib 200 mg twice daily for musculoskeletal pain.

Bilateral elbow joint pain
- Chronic bilateral elbow symptoms have not fully resolved and were noticed more on the day of the visit, which he attributes to weather changes.
- Prior treatment included physical therapy and band exercises; he has not been doing exercises recently.
- He reports functional limitation with reduced grip and difficulty opening a lid.
- History discussed includes medial and lateral epicondylitis with partial tear of the common flexor tendon, degenerative arthritis, tendinosis, and cubital tunnel compression.

Healthcare maintenance and medication coordination with VA, including colorectal cancer screening
- He is coordinating medication fills through the VA for cost and mail delivery and reports receiving some medications from the VA; the VA requested that his medication list be faxed.
- He had VA blood work performed recently, including a testosterone check, and reports being told only a few items were abnormal, including elevated cholesterol; he is on cholesterol medication.
- He also reports a VA-generated estimate of a 1.9% chance of dying of a heart attack before age 60.
- He completed a Cologuard test through the VA and is amenable to repeating colorectal cancer screening through his primary care if needed.
- He requested refills for Trelegy and Claritin (loratadine), noting the allergy

Problem List/Past Medical History
Ongoing
- **Asthma**
- **Bilateral cervical radiculopathy**
- **Bilateral elbow joint pain**
- **Carpal tunnel syndrome, bilateral**
- **Eczema**
- **Eosinophilic esophagitis**
- **GAD (generalized anxiety disorder)**
- **GERD (gastroesophageal reflux disease)**
- **Hip strain**
- **History of shingles**
- **Hypertension**
- **Insomnia**
- **Migraines**
- **Obstructive sleep apnea**
- **Pain of right heel**
- **PTSD (post-traumatic stress disorder)**
- **Restless leg syndrome**
- **Rupture of right trapezius muscle**
- **Sciatica associated with disorder of lumbosacral spine**
- **Tendinitis of shoulder**
- **Tinnitus of both ears**
- **Traumatic brain injury**

Procedure/Surgical History
No history of a procedure has been documented.

Medications
- **albuterol** (albuterol 2.5 mg/3 mL (0.083%) inhalation solution), **5 mg= 6 mL**
- **atorvastatin** (atorvastatin 20 mg oral tablet), **20 mg= 1 tab, Oral, Daily**
- **celecoxib** (celecoxib 200 mg oral capsule), **200 mg= 1 cap, Oral, BID**
- **diclofenac topical** (diclofenac 1% topical gel), **4 gm, TOP, QID**
- **escitalopram** (escitalopram 20 mg oral tablet), **20 mg= 1 tab, Oral, Daily**

Physical Exam

Vitals & Measurements
T: 97.3 °F (Temporal Artery) **HR:** 70 (Peripheral) **RR:** 18 **BP:** 120/83
SpO2: 98%
HT: 182 cm **WT:** 94.750 kg (Dosing) **BMI:** 28.6
Gen: No acute distress, cooperative and pleasant
Psych: Oriented x 4, engaged
Skin: no visible lesions
Neuro: CN II-XII grossly intact

Extremities:
Point tenderness to palpation over the right heel
No swelling or erythema of the right foot
Left elbow pain with limited extension to 160degrees,

Assessment/Plan
49-year-old male with asthma, obstructive sleep apnea, PTSD, and chronic musculoskeletal conditions presenting today for right heel pain with plantar fasciitis history, recurrent bilateral elbow pain, colorectal cancer screening, and medication refills.

1. **Pain of right heel** M79.671 (Medical; Confirmed)
Right heel point tenderness without redness or swelling; history of plantar fasciitis with calcaneal spurs; location of pain concerning for calcaneal spur contributing to pain.
- Ordered X-ray of heel.
- Referred to physical therapy for plantar fasciitis.
- Continue current orthotics; discussed trial of different insole with cushioned heel cup and central gel to offload possible spur.
- Follow up in 1 month to review X-ray and symptoms.

Ordered: **99213-Est pt expanded focused exam 20 to 29 minutes**, GE, 21-Apr-2026 20:15:00 PDT, Pain of right heel | Screening for colorectal cancer | Bilateral elbow joint pain | Healthcare maintenance **Treatment Room**, 21-Apr-2026 20:15:00 PDT

2. **Screening for colorectal cancer** Z12.11 (Medical; Confirmed)
- Ordered Cologuard.

Ordered: **99213-Est pt expanded focused exam 20 to 29 minutes**, GE, 21-Apr-2026 20:15:00 PDT, Pain of right heel | Screening for colorectal cancer | Bilateral elbow joint pain | Healthcare maintenance **Treatment Room**, 21-Apr-2026 20:15:00 PDT

3. **Bilateral elbow joint pain** M25.521 (Medical; Confirmed)

gabapentin (gabapentin 300 mg oral capsule), **300 mg= 1 cap, Oral, Once a day (at bedtime)**
lisinopril (lisinopril 20 mg oral tablet), **20 mg= 1 tab, Oral, Daily**
loratadine (loratadine 10 mg oral tablet), **10 mg= 1 tab, Oral, Daily, 4 refills**
pantoprazole (pantoprazole 40 mg oral delayed release tablet)
fluticasone/umeclidinium/vilanterol (Trelegy Ellipta 200 mcg-62.5 mcg-25 mcg/inh inhalation powder), **1 inh, Inhalation, Daily, 4 refills**

Allergies
No Known Allergies

Immunizations
No Vaccine Results.

History of bilateral medial and lateral epicondylitis with partial tear of common flexor tendon, degenerative arthritis, tendinosis, cubital tunnel compression; pain recurred today; prior steroid injections deferred due to tendon rupture risk.
- Defer physical therapy until heel therapy completed; reassess at follow-up and address if persistent.

Ordered: **99213-Est pt expanded focused exam 20 to 29 minutes**, GE, 21-Apr-2026 20:15:00 PDT, Pain of right heel | Screening for colorectal cancer | Bilateral elbow joint pain | Healthcare maintenance **Treatment Room**, 21-Apr-2026 20:15:00 PDT

4. Healthcare maintenance Z00.00 (Medical; Confirmed)
Requested VA records and recent VA lab results including annual labs and testosterone testing; patient to upload or provide.
- Refilled loratadine and Trelegy; provided prescriptions to be printed for patient to fax to VA for filling.

Ordered: **99213-Est pt expanded focused exam 20 to 29 minutes**, GE, 21-Apr-2026 20:15:00 PDT, Pain of right heel | Screening for colorectal cancer | Bilateral elbow joint pain | Healthcare maintenance **Treatment Room**, 21-Apr-2026 20:15:00 PDT

Attestation(s)
I discussed the patient's findings and management options with the resident physician. I agree with the treatment plan as documented above./ Sheryl Dickstein, MD
