Chief Complaint:
Follow Up Visit (Groin pain/penile pain)

HPI
Derrick KeenanLance Duarte is a 10 year old 8 month old male who is seen today in followup. See prior notes for details of his orchoipexies (done in Washington state). He has a new symptom of left upper thigh pain. Worse with certain positions. He has suprapubic pain that seems to occur randomly. Occasionally has pain at the tip of the penis. It does not seem to correlate with voiding or stooling. He is still reluctant to have a BM at school. Having BMs 1-3x daily, soft and not uncomfortable. No incontinence. No UTIs. No hematuria. He is very active with sports.No obvious severe perineal trauma but he has been hit or kicked there occasionally (never caused hematuria)

Derrick KeenanLance Duarte's mother provided the above information for the HPI.

Assessment and Plan:

10 year old male with pelvic floor dyscoordination and perineal pain. I suspect pelvic floor muscle strain and/or spasm. No overt LUTS but he does have some incomplete bladder emptying. Long talk about pelvic foor, referred pain, groin pain, etc.

-refer to PT for pelvic floor physical therapy
-RTC after above for uroflow and review

I spent 30 minutes today in counseling, review of records, coordination of care, and documentation, separate from uroflow/PVR
