		Cervical Cancer Screening: Women should begin having a Pap smear at age 21. Women aged 21-29 should be screened every 3 years. Women aged 30-65 should be screened every 3-5 years. Your doctor may stop performing pap smear screenings if you have had a hysterectomy or are age 65 or above, if you meet certain criteria: Ã¢ÂÂ¢ Three consecutive negative cytology results or two consecutive negative HPV results within the previous 10 years with the most recent test within the past 5 years. Ã¢ÂÂ¢ No history of a high-grade precancerous lesions (cervical intraepithelial neoplasia grade 2 or grade 3 or cervical cancer within the past 20 years). Breast Cancer Screening: Average-risk women should initiate mammography screening at age 40 and no later than age 50. Screening mammography should occur annually, but no more than every 2 years and continue until at least age 74. If you are at higher risk of breast cancer you should be screened annually with consideration of other methods, including breast ultrasound and MRI depending on your particular risk assessment. You should be aware of any changes in your breasts and notify your provider of any concerns. Screening for Osteoporosis: Postmenopausal patients 65 years and older should be screened for Osteoporosis with a Bone Mineral Density test (DXA) . If you are younger than 65 and postmenopausal, your risk for osteoporosis will be reviewed by your provider using a formal risk assessment tool. Risk factors for osteoporosis include parental history of hip or spine fracture, certain ethnicities, body Mass Index (BMI) less than 20 mg/mÃÂ² or body weight less than 127 lbs., smoking, excessive alcohol use, and certain health conditions, diseases, or medications associated with secondary osteoporosis. Colon Cancer Screening: Average risk women should consider colonoscopy every 10 years starting at age 45, but no later than age 50, until age 75. Other factors such as general health and life expectancy may be taken into consideration for women ages 75-85. If you choose not to be screened with a colonoscopy your provider will discuss alternatives with you. Women at high risk may be screened at an earlier age and more frequently depending on your history and risk factors.	mbradley55	Not available	05/16/2026 16:12:01

Encounter Date	Encounter Id	Patient Instructions	Last Modified By	Organization Details	Last Modified Time
		Diabetes Screening: The American Diabetes Association recommends screening for diabetes every 3 years for women 45 years of age and older. If you are at risk for diabetes, at any age, your provider will recommend screening. Thyroid Screening: The American Thyroid Association and American Association of Clinical Endocrinology recommend routine screening every 5 years starting at age 35. Screening for Sexually Transmitted Diseases: Chlamydia and Gonorrhea are two of the most common sexually transmitted diseases with 75% of Chlamydial and 68% of Gonococcal infections showing no symptoms. Women should be screened for Chlamydia and Gonorrhea that are age 25 and under or women over age 25 at increased or special risk. Women should be screened for HIV aged 13-64 or at increased risk. 84% of cases are attributed to heterosexual sex. Women at increased or special risk or requesting STI screening should be screened for Hepatitis B and C, Syphilis, Herpes, Trichomonas. Vaccination Recommendations for Ages 27-45: Screenings for vaccination status should be based on the CDC Adult Vaccine Schedule. Recommendations include seasonal flu vaccine, Hepatitis A&B, and the Varicella series for those who are unvaccinated and have no history of infection. Completion of the HPV vaccine can be considered if desired and you have not been previously vaccinated. All eligible women should receive full vaccination against COVID-19. If you are actively attempting pregnancy, you should not receive live vaccines. Vaccination Recommendations for ages over 45: Screenings for vaccination status should be based on the CDC Adult Vaccine Schedule. Recommendations include Hepatitis A&B and the seasonal flu vaccine. Zoster vaccine (Shingles) is recommended at age 50. Pneumococcal vaccine is recommended at age 65. All eligible women should receive full vaccination against COVID-19 periodically. RSV vaccine is recommended for all patients over 75 and patients age 60-74 at high risk. Hereditary Cancer Screening: Your provider will review your family history of any cancers in your first- and second-degree relatives if you know that information. A referral for genetic counseling may be made if your family history includes a diagnosis of cancer at a young age, multiple cancers of the same type in different family members of the same side, or multiple primary cancers in one individual, or multiple family members on the same side affected by a combination of breast, ovarian, endometrial, and/or gastrointestinal cancers. The information and handouts above will be available to the patient on the patient portal.			
		51 yo G2P2. NSVD x 2. s/p RATLH/BS. Here for annual AND PROBLEM VISIT. No longer needs paps. Mammo rx-rad lmtd through PCP. PHQ reviewed (Behavioral Health Screening) = 4. No intervention needed. Pt declines/does not accept a chaperone today for the pelvic exam. PROBLEM: See HPI. Chronic/worsening urinary stress incontinence. > 1 year issue. Kegels reviewed. Recommended PFPT and referral sent today. If does not help, recommend urology for eval and treatment. ***Pt understands, via sign in every exam room, that she may be charged a co-pay for addressing problems/issues outside of the annual exam appointment.*** PCP: Edward Mulligan, MD.	mbradley55	Not available	05/18/2026 11:52:08

History of Present Illness

UEHRC Annual Well-Women Visit Age 40-64 Reported by patient. Current Medical History: no active medical problems; no recent surgeries or hospitalizations
Relevant Family History: no family history of breast cancer; no family history of ovarian cancer; no family history of uterine cancer; no family history of colon cancer; no family history of blood clots/DVT
Last Pap smear: last Pap smear was normal; 7/2024
Mammography: last mammogram was normal (dense); 8/2025 Rad Ltd
Contraceptive Method: contraceptive method: N/A Ã¢Â hysterectomy
Sexually Active: Yes: spouse
STI Screen: declines STI testing
Urinary Incontinence (UEHRC) Reported by patient. *Location: leakage of urine through urethra
*Quality: leakage of urine with urge; leakage of urine with exertion; urinary frequency
*Severity: moderate; number of pads used per day 1; requires constant protection
*Duration: years
*Timing: constant
*Associated Signs & Symptoms: urinary frequency
*Modifying Factors: unchanged with nothing; worse with physical exertion; worse with coughing; worse with sneezing PHQ9: 4 chaperone: declined

Physical Exam

Physical Exam
Annual Exam-Hysterectomy (UEHRC)
Chaperone
Chaperone: offered and declined

Constitutional
General Appearance: healthy-appearing, well-nourished, well-developed

Head
Head: normocephalic

Breast
Bilateral: no skin changes, nipple appearance: normal, no abnormal nipple secretions, no tenderness, no masses palpable

Right Breast: normal

Left Breast: normal

Abdomen
Inspection/Palpation/Auscultation: soft, non-distended, no tenderness

Female Genitalia
Mons: normal, no erythema, no excoriation, no atrophy, no lesions, no vesicles/ ulcers, no masses, no swelling, no tenderness

Labia Majora: normal, no erythema, no excoriation, no atrophy, no discoloration, no lesions, no vesicles/ ulcers, no masses, no swelling, no tenderness

Labia Minora: normal, no erythema, no excoriation, no atrophy, no discoloration, no lesions, no vesicles, no masses, no swelling, no tenderness

Introitus: normal

Bartholin's Gland: normal

Vagina: normal, no discharge, no blood present, no erythema, no atrophy, no lesions, no ulcers, no swelling, no masses, no tenderness, no prolapse

Cervix: absent

Uterus: absent

Urethral Meatus/ Urethra: normal meatus, no discharge, well supported urethra, no masses, no tenderness

Physical Exam

Urethral meatus/ Urethra normal meatus, no discharge, well supported urethra, no masses, no tenderness

Bladder: non-distended, no palpable mass, non-tender

Adnexa/Parametria: no mass palpable, no tenderness

Psychiatric
Orientation: to person, to place, to time

Mood and Affect: active and alert, normal mood, normal affect
