Expand All Collapse All

Assessment & Plan
1. External hemorrhoid (Primary)
Resolved after recent ER visit. No ongoing bleeding. Improved on topical steroid cream and stool softener. Patient deferred exam today
- ER DC summary reviewed with the patient
- Continue topical steroid cream and stool softener as previously prescribed.
- Increase dietary fiber, greens, and water intake.
- Avoid red meat and alcohol to reduce constipation risk.
- Use a cushion to reduce pressure while sitting.
- Avoid heavy lifting and activities that increase intra-abdominal pressure. Use lighter weights and cardio.
- If bleeding recurred, he was instructed to send a message via My Health Online for general surgery referral.

2. Back spasm
Intermittent low back and right hip tightness with episodic spasms. Suspected mechanical etiology related to prolonged sitting and sedentary lifestyle.
- Prescribed as needed muscle relaxant. Take at night due to sedative effects.
- Prescribed pain medication.
- Referred to Goldberg Physical Therapy in Manteca for core and back strengthening.
- ibuprofen (MOTRIN) 400mg Tab; Take one Tab by mouth every 6 hours as needed for Pain Dispense: 60 Tab; Refill: 0
- acetaminophen (TYLENOL) 325mg Tab; Take two Tabs by mouth every 6 hours as needed for Pain
- diclofenac sodium (VOLTAREN) 1% Gel; four g to affected area(s) four times daily as needed for Pain (max: 16 grams/joint/day; 32 grams/day body max) Dispense: 300 g; Refill: 6
- cyclobenzaprine (FLEXERIL) 5mg Tab; Take one Tab by mouth at bedtime as needed for Muscle Spasms Dispense: 14 Tab; Refill: 0
- REFERRAL TO PHYSICAL THERAPY, EXT
- PR COMPLEX E/M VISIT ADD ON

Follow Up
Return if symptoms worsen or fail to improve, for Go to ER if condition worsens.

Subjective
Pedro Bautista Jr. is a 33 year old male who presents to Sutter Gould Manteca for Patient presents with:
Follow up: ER follow up

History of Present Illness
Pedro Bautista Jr. is a 33 year old male who presents for ER follow-up for a thrombosed external hemorrhoid.

Two weeks ago he developed a hemorrhoid that ruptured over a weekend, leading to an ER visit where he was given a topical cream and a stool softener.

On 4/24/26 he passed a blood clot with significant rectal bleeding that lasted most of the day, then stopped and has not recurred. He feels the hemorrhoid is now smaller and he denies current rectal bleeding.

Potential contributors include prolonged sitting for commute and work and intermittent low-fiber intake with occasional constipation. He has reduced heavy lifting at the gym and is focusing on lighter weights and more cardio.

He also has intermittent low back and right hip tightness about monthly with decreased mobility and occasional spasms when bending to lift objects.

Vitals:
