Subjective

Patient ID: Alisa Camarena is a 22 y.o. female.

History of Present Illness
Alisa Camarena is a 22 year old female who presents with recurrent throat infections and elevated LDL cholesterol.

She has experienced recurrent throat infections, with three episodes in the last year. An ENT specialist evaluated her, and she is now on a waiting list for a tonsillectomy in the summer. Since starting medication, she has not experienced any sore throat, cough, or tonsil stones. A recent strep throat swab was negative.

She reports severe and worsening midline thoracic back pain. No imaging studies have been conducted yet. She recalls a previous discussion about a referral to a physical therapist, but she has not received it yet.

Her recent lab results indicate that her urine test was negative, and red blood cell, white blood cell, and platelet counts are within normal limits. Her thyroid function is normal, and her hemoglobin A1c is 4.7. Her LDL cholesterol is 106. She notes minimal red meat consumption and mentions a possible family history of high cholesterol. Her vitamin D level is normal at 30, and kidney, liver, and electrolyte levels are within normal limits.

Assessment/Plan

Problem List Items Addressed This Visit

None

Visit Diagnoses

Moderate mixed hyperlipidemia not requiring statin therapy - Primary

Relevant Medications

cholecalciferol, vitamin D3, (Vitamin D3) 25 mcg (1,000 unit) capsule

Tonsil stone
Chronic midline thoracic back pain

Relevant Orders

Ambulatory referral to Physical Therapy

Overweight with body mass index (BMI) of 27 to 27.9 in adult
Depression screening negative

Assessment & Plan

Chronic tonsillolithiasis
Recurrent tonsil infections with ENT recommendation for tonsillectomy.
- Proceed with scheduled tonsillectomy in the summer.
- Follow up in 1 year; instructed to return sooner as needed.

Chronic midline thoracic back pain
Severe worsening pain with no imaging or physical therapy initiated.
- Sent referral for physical therapy.
- patient declines xrays at this time

Mixed hyperlipidemia
LDL cholesterol slightly elevated at 106 mg/dL; no medication needed currently.
- Continue to monitor cholesterol levels.
-Mixed Hyperlipidemia not on statin. Explained to patient the importance of cholesterol management and steps to be taken to improve cholesterol levels. Recommended low-fat high-fiber diet to help with elevated cholesterol. Recommended more chicken, fish and veggies and less red meat/pork, fried foods and carbs.

General Health Maintenance
Routine health maintenance with normal labs and no diabetes or prediabetes.

Depression screening
- Screened for depression and anxiety and scores were negative.

Orders Placed This Encounter
Procedures

- Ambulatory referral to Physical Therapy
