ASSESSMENT/PLAN

1. Osteoarthritis of left knee joint
   Est, suboptimal pain control. Pt with worsening left knee pain, consistent on hx and physical with known left knee OA. CSI repeated today as third in series over last 15 months (previously MAR 2025 and NOV 2025).
   - renewed referral for PT
   - continue topical Voltaren PRN
   - Tylenol 975mg Q8hr PRN
   - discussed pain rules: limit activity to <5/10 pain
   - In future, may consider alternative to CSI such as hylarounic acid vs prolotherapy
   - Less likely surgical candidate for knee replacement given age, comorbidities

Ordered:
Referral Request 2.0 - DoD

Orders:
acetaminophen (Tylenol 325 mg oral tablet), 3 tab(s), Oral, every 8 hr, PRN pain or fever, # 50 tab(s), 1 total refill(s), Maintenance, Medication, Pharmacy: DOD Travis Pharmacy
Andrew M. Marino, MD
Capt, USAF, MC
Family Medicine Resident Physician, PGY-1
60th HCOS/SGGF
David Grant Medical Center, Travis AFB, CA

Referral Orders - This Visit
Referral Request 2.0 - DoD - Completed
-- 05/07/2026 12:45:00 PDT, Medical Service Physical Therapy, 93 yo male with known OA and chronic L knee pain, Evaluate and Treat (DoD), Osteoarthritis of left knee joint

PROCEDURE NARRATIVE

PROBLEM LIST/PAST MEDICAL HISTORY

Ongoing
- Allergic rhinitis
- Atrial fibrillation
- BPH - benign prostatic hyperplasia
- Bradycardia
- Chronic venous insufficiency
- CKD (chronic kidney disease) stage 3, GFR 30-59 ml/min
- CKD stage 3
- Complete heart block
- Diabetes
- Diabetes mellitus
- Dry eye
- Erectile dysfunction
- HTN (hypertension)
- Hyperlipidaemia
- Hypogonadism
- Left side sciatica
- Long-term current use of anticoagulant
- Low back pain
- Mitral regurgitation
- Osteoarthritis of left knee joint
- Presence of cardiac pacemaker
- Pseudophakia
- Sinus node dysfunction
- Tricuspid regurgitation

Historical
- Chronic kidney disease

Office and Clinic Notes

Universal Protocol/Procedure Final Time Out:
[x] Yes [ ] No Consent completed/signed by provider, patient, and witness, including date and time.
[x] Yes [ ] No Pre-procedure verification process and site marking (if applicable) completed, with patient involvement in site/side marking (if applicable).
[x] Yes [ ] No Final Time Out - Physician paused (if alone) or verbally confirmed with the procedure team that this is the correct patient (identified with name and DOB) and procedure. Site/side marking confirmed (if applicable). Allergies were verified. The patient was positioned correctly for the procedure. All necessary equipment and relevant imaging was available. Fire risk assessment was completed.

Risk/benefit/outcomes d/w pt to include but not limited to bleeding/infection/paresthesia/pain/need for repeat procedure. Pt agreed and signed written consent for injection to RIGHT_ knee joint. Timeout performed with side and sight verification and witness. Site prepped with chlorhexidine. Ethyl chloride spray used for topical anesthetic. 4mL 1% lidocaine and 1mL of Kenalog 40 injected into the knee joint via 22g needle via anterolateral palpation-guided approach with knee flexed to 90 degrees. Needle withdrawn and inital gush of blood stopped with gauze and bandage placed. D/w pt return immediately if any signs of infection or bleeding. Pt expressed understanding.

HISTORY OF PRESENT ILLNESS
Intake HPI:
HPI
Pt has no concerns. Only here for L knee injections. Sharp 9/10 pain present, last injection was completed in early November.

Provider HPI:

Agree with above with additional/clarification:

93 yo M with hx significant for L knee OA presenting for worsening L knee pain

- has tried topical voltaren, home PT exercises (although referral for in person ran out)
- associated with some clicking, no falls
- CSI in MARCH and NOV 2025. Interested in repeat today
